# FortiPhish™

Highlights

Cloud-delivered phishing simulation service offering:

- Rich analytics
- Granular reporting
- Custom Phish builder
- Phish alert button
- Campaign risk grades
- Difficulty levels

Phishing Simulation by Fortinet

Email remains a primary threat vector for malicious actors looking to gain access to your environment to steal sensitive data, gain access to financial resources, or lay siege to files to demand a ransom.

According to Verizon's Data Breach Investigations Report 2022, 36% of successful breaches involved phishing. Meanwhile, ransomware's involvement in breaches doubled to 25% from the prior year. With one-third of ransomware attacks arriving via email, the stakes have never been higher for organizations. Unfortunately, when a malicious email does get through, we see untrained and uninformed employees creating risk to organizations through their behavior.

FortiPhish Overview

Fortinet FortiPhish is a phishing simulation service to test your employees against real world phishing techniques identified by FortiGuard Labs, Fortinet's elite cybersecurity threat intelligence and research organization. With phish testing as part of your broader security awareness program, your employees can learn to recognize, avoid, and report email-based cyber-threats including phishing, impersonation, Business Email Compromise, and ransomware.

Phishing simulation to teach your employees to identify, avoid, and report phishing and other email-based threats.

Phish	Grade	Teach
Perform Phishing Testing	**Assess and Grade Results**	**Teach and Change Behavior**
Test awareness and vigilance across your users through real-world simulated phishing attacks.	Analyze results and visualize program trending while identifying at-risk users and areas for improvement.	Use training at the point-of-click and awareness training to teach users on the risk posed by threats.

The Case for FortiPhish

Use FortiPhish with the Fortinet Security Awareness and Training service to create a cyber-aware workforce.

[Learn more](#)

Problem

Phishing threats including email-based ransomware may result in data loss, disruptions to business operations and financial losses.

Solution

When combined with security awareness training, testing your employees or users with real-world simulated phishing attacks teaches them how to identify and be on guard against social-based attacks.

Benefits

- Tests the ability of users to identify potential email-borne threats
- Assesses employee fallibility, vigilance, and improvement across campaigns
- Teaches employees to know how to spot, avoid, and report potential threats

Pre-defined and Custom Templates

Comes out of the box with editable phishing templates or create your own

Enterprise Grade User Definition

Integrates smoothly with your existing user directory

Security Awareness Training

Leverage integration with the Fortinet Security Awareness and Training service to assign training for problematic behavior

Multi-Language Support

Target your entire workforce with translated templates ready for use

Comprehensive Dashboards with Data Visualization/Interactive GUI

Get full visibility into campaign and user performance and associated risk

Phish Testing Based on Difficulty

Challenge employees by making phish testing harder as your employees get smarter

Features and Benefits

FortiPhish is a cloud-delivered phishing simulation service using deep knowledge of phishing techniques based on research by Fortinet FortiGuard Labs. This deep knowledge makes the phishing campaigns used to test users highly credible. FortiPhish also provides rich analytics to help administrators assess the susceptibility of users to phishing and related social engineering attacks. Administrators can then identify users who may need extra training to get up to speed with your organization's anti-phishing efforts.

Service Features - Licensing

FortiPhish includes everything you need to test your employees against the latest email threats.

LICENSING	PER-MAILBOX/ USER SUBSCRIPTION
Phish Templates
